1 . Due to Ongoing Trade Disputes, Corn Will Reclaim Acreage From Soybeans in 2019 (贸易争端引起2019年玉米挤占大豆面积)

简介: As trade disputes between the U.S. and China persist, U.S. farmers are reluctant to plant more soybeans in 2019. According to the USDA's 2019 Economic Outlook, corn will steal acreage away from soybeans to reclaim the top spot in 2019. Soybean acreage exceeded corn acreage in the United States for the first time since 1983 in 2018, but tariffs placed on soybeans by China have impeded sales of the U.S. bumper crop, resulting in record carryover stocks of roughly 910 million bushels. Meanwhile, China has been able to weather the loss of U.S. supply by scraping together South America's dwindling soybean stocks. Estimates peg the loss in crop receipts to U.S. soybean producers at \$7.9 billion compared to the same period last year.

2 . South Africa's Corn Exports Threatened by Drought (干旱威胁南非玉米出口)

简介: A late start to South Africa's corn growing season threatens to significantly curtail production in what has traditionally been the region's grain-growing powerhouse. Drought kept seeds from going into the ground for weeks. Partly as a result, South Africa's area planted to corn is 7 percent below what was expected. What is growing is at increased risk; with soil moisture low, the crop is especially vulnerable to additional setbacks. This could result, for instance, from a moderate El Niño climate occurrence that is affecting weather patterns in the region this year and that often brings dry conditions.

1 .The relationship between cottage food laws and business outcomes: A quantitative study of cottage food producers in the United States (农家食物法与商业产出之间的关系：美国农家食物生产者的量化分析)

简介: The increasing popularity of cottage foods in the United States requires that state laws regulating the industry be given careful consideration. However, little is known about cottage food producers or their businesses. This article discusses results from the first comprehensive survey of cottage food producers in the United States. Linear and logistic regression analyses of survey responses from 775 cottage food producers and aspects of state cottage food laws suggest restrictive state laws may hinder entrepreneurship in rural communities. These results suggest policymakers should consider reducing restrictions on the cottage food industry in order to promote small-business creation and growth, especially among women and rural populations.

2 . Addressing food and nutrition security from a human rights-based perspective: A mixed-methods study of NGOs in post-Soviet Armenia and Georgia (从人权角度解决食物与营养安全：基于苏联后的纳米比亚和格鲁吉亚NGO的混合方法研究)

简介: Increasing numbers of non-governmental organizations (NGOs) declare a move from a needs- to a human rights-based approach (HRBA) in addressing food and nutrition security. Little work, however, has been done to reveal how HRBA to food is realized at a country level. Using a mixed methods approach, we demonstrate main challenges for NGOs' adoption of HRBA in Armenia and Georgia. A combination of NGO operational and state level factors hamper rights-based food and nutrition work of NGOs. NGOs' willingness and capacity to engage with HRBA to food and confront the state is influenced by the history of post-Soviet transition, views on the state versus market, and isolation from transnational actors propagating the right to adequate food.
